Opportunities to Invest in

Managing Energy for the Future

By playing a role in designing the GEM program, we hope to hire many highly qualified graduates of this program, as well as increase the knowledge of our current employees who plan to participate in it.

—Don McClure, Vice President
Finance/Business Services,
EnCana

When it comes to energy's influence in the world, the knowledge of tomorrow's leaders is vital to our national security, economic stability and environmental safety. But who will educate tomorrow's leaders in vital energy issues? The Business School at UC Denver will. In partnership with the energy industry, government and community leaders, UC Denver has created a leading-edge MS in Global Energy Management (GEM) program. Designed to meet the needs of all sectors of the energy industry, the GEM Program is dedicated to educating those individuals who will create, lead and manage the world's energy companies in the future.

The Challenge

As the need for energy expands, and as present leaders in the industry approach retirement age, there is a growing and critical shortage of people educated and prepared to run companies in the energy industry. As a result, the challenges faced by leaders in the energy industry are unprecedented. New thinking and creative solutions are required to meet the energy needs today and in the future.

Your investment in faculty, students and the program is needed to help produce innovative minds to lead the energy industry into the future and make an impact on one of the most critical issues of our time.

The Program

The Global Energy Management program (GEM) was developed in collaboration with leaders in the energy field to solve this problem of leadership succession. The Master of Science in GEM is an innovative program that fosters collaboration between academia, community, government and the energy industry. Our unique hybrid education system combines classroom and online formats, allowing students to complete the program wherever they work and travel on a 24/7/365 basis. The curriculum will be taught only by top-tier professors and qualified industry practitioners. Graduates of the GEM program will be educated and trained in all areas of energy management, including conventional and nonconventional, renewable and alternative energies.

The Investment from You

Strategic gifts will enable the GEM's program to attract the best and brightest students and educators to create a premier global program. We're looking for partners in this exciting program to support *research, scholarships, professorships and lectureships*.
